TEMPLATE

Restoration Plan

SUMMARY

This document details a four-year Restoration Plan for the Project seeking certification. It provides a framework for Developers to present their restoration objectives and the interventions planned to achieve them.

Table of *Contents*

Intervention *Plan*

GENERAL INFORMATION

1. Professional responsible for the Restoration Plan

Ecologists or related professionals who are responsible and accountable for the Restoration Plan. Must include name, profession and role in the Project's team.

2. Map of Different Project Zones (Zonation)

Insert one or multiple maps portraying the different Project zones.

It must contain a single map in which the different zones are clearly delimited and differentiated. When pertinent, it should also include a single map per zone to showcase their particularities.

3. Objectives

Describe the four-year objectives validated during the Community Consultation on Ecological Recovery.

4. Summary of Interventions

Describe the interventions in general, including the main steps chronologically, the rationale behind them and expected outcomes.

DETAILED ACTIVITIES

1. List of Species to be Planted

Common name	*Scientific name* (ICNafp)
Example: Ipê Amarelo	*Example: Handroanthus albus*

2. Detailed Interventions Plan

The tables below must detail the intervention plan, using one table per intervention. If one objective includes multiple interventions, multiple boxes must be used.

💡 If an intervention has social implications, such as displacing activities and creating alternative livelihoods or jobs, it must be reported in the Social Additionality Plan.

Objective 1: Name of the Objective

Intervention 1.1: Name of the intervention	
Zone(s)	List the zones concerned by the intervention. Make sure that this information matches with the results from the Zonation process.

Timeline	Start mm/YYYY End mm/YYYY
Detailed description	Describe the actions involved in detail. Include information about the magnitude of the intervention (e.g. area size, number of managed tree individuals and species).
Rationale	Describe the reasons for having selected this intervention.
Expected outcomes	Detail the expected outcomes.
SDG(s)	*When one or more Sustainable Development Goals (SDGs) relate to the expected outcomes, include them in this section. Detail the specific UN SDG 2030 Target(s), using the official UN Global Indicator Framework as a reference.*
Risks	Describe the potential risks (including both environmental and socio-institutional).
Indicator(s)	*Select one or multiple indicators to monitor the intervention's progress towards the Objective. For each indicator, include a description and the unit used.*
Monitoring methodology	*Describe the methodology used to monitor the intervention's progress. This must include the method of collection of information and identification of the organisation or individuals involved in the collection.*

Objective 2:

Intervention 2.1:	
Zone(s)	
Timeline	
Detailed description	
Rationale	
Expected outcomes	
SDG(s)	
Risks	
Indicator(s)	
Monitoring methodology	

Objective 3:

Intervention 2.1:	
Zone(s)	

Timeline	
Detailed description	
Rationale	
Expected outcomes	
SDG(s)	
Risks	
Indicator(s)	
Monitoring methodology	

APPENDIX 1: SPECIES SELECTION TEMPLATE

💡 For Projects that include reforestation as an ecosystem restoration approach or seek to reintroduce species, please use the table below to report the species selection.

Species scientific name	Short description: Native or non-native, expected lifetime, pioneer or long-lived tree species, functionality in the ecosystem, social benefit from it.	Rationale: Why choose this species?	Risks of using this species (environmental and social)

Ecosystem Restoration Standard
